Does stress affect the course of chronic disease? Are friendships and community activities vital to recovery after surgery? Are blood pressure measurements affected by where or how the test is taken? For more than 30 years, *Behavioral Medicine* has answered such questions by publishing well-written and carefully researched articles about the mind-body relationship. *Behavioral Medicine* (formerly known as the *Journal of Human Stress*) is a multidisciplinary quarterly journal that physicians, nurses, psychologists, and counselors will not want to miss. Three-part, state-of-the-art syntheses devoted to a single topic (e.g., disability in older adults, smoking, cardiovascular disease) are published on occasion. Each triptych includes a review of the literature; practical suggestions to guide clinicians in translating scientific knowledge into action; and a discussion of desired changes in public policy, education, and insurance coverage.

Quarterly; ISSN 0896-4289
